Putting waste on a path to renewal

In the world of manufacturing, material waste by-products are often generated. Our Solvent Recovery processes can reclaim solvents from your waste and by-product streams, producing high-purity solvents that can be reused in industrial applications. Transforming waste. Reducing ecological impact. Find out how our Solvent Recovery facilities can be good for business and better for your environmental footprint.

Industrial
Materials
Group

For more than 100 years, Kodak has been giving imagination an outlet by creating new ideas, then bringing them to life. Today that science can empower you in thousands of ways. Our Industrial Materials Group has the experience to help you create what's next, so you can bring tomorrow's ideas to market today.

Experience. Capability. Compliance.

Our Solvent Recovery facilities have been in service for over 60 years. Our plants run round-the-clock and are staffed by employees with many years of expertise. Each solvent recovery opportunity is first evaluated by our team of engineers and Health, Safety, and Environmental (HSE) professionals. After being analyzed in our state-of-the-art laboratory facilities and tested in our pilot equipment to determine the optimum processing scheme, solvent streams are then purified at our two large solvent recovery sites located in Rochester, New York. We have multiple distillation towers (batch and continuous). We also have storage capacity to handle waste streams both small and large. Our sites can accept deliveries via truck or railcar, and our highly automated processes are continuously monitored from a central control room. Our site is ISO 14001 registered and our corporate HSE professionals work closely with our Solvent Recovery team to assure compliance with all environmental regulations.

To find out what Solvent Recovery can do for your business, please visit kodak.com/go/img or call Tom Rutalis, Technical Manager Solvent Recovery Services, at 585-722-4371.
